

G-CLEAN STORAGE TANK CLEANER

DESCRIPTION

G-CLEAN Storage Tank Cleaner is a non-toxic, bio-based colloidal product designed to make the difficult work of cleaning oil field storage tanks easier while increasing worker safety. G-Clean's Storage Tank Cleaner is designed for breaking down and removing hydrocarbons, asphaltenes and waxes from tanks used to store crude or distillates from the field to the refinery. Produced and manufactured through a proprietary process that forms incredibly small particles called micelles that are approximately one to four nanometers in size, these particles create an extremely high surface area to volume ratio in the product, enabling the micelles to penetrate and emulsify the hydrocarbon molecules. G-Clean Storage Tank Cleaner leaves behind an invisible polymer residue that aids in preventing re-adherence of contaminants to the tank, so that cleaning with this product becomes easier with each use.

APPLICATIONS

G-CLEAN Storage Tank Cleaner is a completely non-toxic and Ultimate Biodegradable product for cleaning hydrocarbon storage tanks.

DIRECTIONS

Pre-dilute product as per instructions, then apply with a pressure washer, sprayer or pump. Thoroughly and completely wet the tank, allowing product to dwell. Pump out effluent, pressure wash to rinse. This product is free rinsing in both fresh and salt water.
